SUMMARY

Software Engineer with experience owning and building scalable backend and full-stack systems, including REST APIs, event-driven services, and cloud-deployed applications. Strong foundation in data structures, algorithms, and system design, with hands-on experience delivering production-ready code, debugging live issues, and improving system reliability across backend, databases, and cloud infrastructure.

EXPERIENCE

Anthum

Founding Engineer

Feb 2026 - Present

San Francisco

- Led end-to-end development of an AI-enabled marketplace platform, owning architecture decisions across frontend, backend, and infrastructure.
- Built and optimized complex, real-time data synchronization workflows utilizing WebSockets and Redis caching, dramatically reducing client-side load times.
- Integrated AI-assisted workflows into core product experiences to automate operational tasks and improve user productivity.
- Partnered directly with founders to translate ambiguous business requirements into technical roadmaps and shipped features from 0 to 1.

Nuubi

Software Developer Intern

Oct 2025 - Jan 2026

Remote

- Developed backend services and APIs with Java and Kafka for a collaborative learning platform, enabling real-time messaging and notifications under low-latency constraints.
- Built REST and WebSocket APIs using Node.js and Socket.io to handle concurrent users with sub-100ms message latency.
- Integrated ML-based text processing services (summarization and moderation) into backend workflows, improving content handling efficiency.
- Taken ownership of backend components for messaging workflows, debugging production issues and improving system reliability.

Skyinfolab Software Solutions

Software Engineer

Jan 2024 - Aug 2024

India

- Built and maintained backend services using Django and REST APIs, reducing API latency by ~30% through query optimization and caching.
- Designed data models and optimized database queries in PostgreSQL and MongoDB, improving query performance by ~35%.
- Automated build and deployment workflows using Docker and GitHub Actions, reducing release errors and downtime.
- Owned end-to-end backend feature implementations using JavaScript and AWS Lambda, containerized with Docker and deployed via GitHub Actions, improving deployment speed and system stability.
- Participated in code reviews and debugging using GitHub and Chrome DevTools within an Agile team, which helped maintain code quality and lowered production bugs.

PROJECTS

AI-Powered Financial Insights Platform (Finorn)

- Designed and built a production-grade financial management SaaS with smart invoicing, contract workflows, client management, and real-time dashboards.
- Implemented secure backend services with JWT authentication and role-based access control (RBAC) to support multi-tenant usage.
- Built AI-driven analytics pipelines for revenue forecasting, expense insights, and business health scoring using statistical models and LLM-assisted analysis, improving forecast accuracy by ~25%.
- Deployed containerized services on AWS with CI/CD pipelines, encryption at rest/in transit, Stripe payments integration, and live KPI tracking to ensure production reliability.

E-commerce & Real-Time Analytics Platform

- Designed and built a microservices-based marketplace using Kafka-driven event architecture, implementing reliable order processing with idempotent consumers, dead-letter queues (DLQs), and retry mechanisms to ensure fault tolerance and system resilience.
- Developed REST and GraphQL APIs with a React frontend, improving page load times by ~20% and overall system throughput by ~40%, while integrating a Redis-cached recommendation engine to enhance product discovery.

AI Network Threat & DDoS Detection System

- Designed a full ML pipeline for network traffic analysis, including parsing and cleaning 80+ flow-level features, scaling, and feature selection.
- Trained and optimized Random Forest and XGBoost models, achieving 98%+ F1 score, and packaged the solution as a reproducible scikit-learn pipeline with threshold tuning, versioned artifacts, and comprehensive evaluation using ROC-AUC and precision/recall metrics.

TECHNICAL SKILLS

Programming Languages: Python, C++, Java, JavaScript, SQL

Frameworks & Libraries: React, Next.js, Node.js, Django

AI/ML Frameworks: Scikit-learn, XGBoost, PyTorch, TensorFlow, RAG, LLM Integrations, LangChain

Databases & Data Systems: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Kubernetes, CI/CD Pipelines, Kafka, Terraform

Tools & Practices: Algorithms & Data Structures, System Design, Microservices, REST & GraphQL APIs, Git/GitHub/GitLab

EDUCATION

University of Cincinnati

Master's, Computer Science

2024 - 2026

- **Coursework:** Algorithms & Data Structures, Distributed Systems, Web/Cloud Computing, Database Systems, Machine Learning

Backstage Pass Institute of Gaming and Technology

Bachelor's, Computer Science and Game Development

2020 - 2024
